

ALSAV PL3 treatment versus Biological Polypeptide Treatment in Blocking the Immune System.

Geo Savulescu, 2010, Buzias.

ALSAV PL3 TREATMENT.

- 1. My treatment - what illnesses?**
- 2. Medecine and treatment.**
- 3. The problem of the autoimmune disease.**
- 4. Versus -Biological Polypeptides treatments which are blocking of immune system**
- 5. side effects**
- 6. Advantages of ALSAV PL3**
- 7. Conclusions**

1.

I am treating rheumatic inflammatory ill states as Akylosing Spodyltis (AS)(1-2 stage of evolution), Rheumatoid arthritis (RA)(1-2 stage of evolution), And many other rheumatic ill states as: lombalgia, osteoarthritis, hand-shoulder pain, and other rheumatic pains....

My treatment use homoeopathical medicine ALSAV PL3, which is the third hahnemannian dilution.

I use injections with ALSAV PL3 in the regions with pain – that means periartrodial, subcutaneous, intramuscular, intraarticular, generally speaking in the mesenchime.

I use ALSAV PL3 5 ml in injection or ... 15ml, 20ml, or even more. It depends on the pacient state – pains, tumefactions, sinovial liquid.

2.

ALSAV PL3

It is polypeptides in solution. I use the third centesimal hahnemannian dilution.

I produce it from the Horse Serum (HS) as starting material by hydrolysis.

The Mother Tincture (MT) is a concentrated solution of polypeptides results by HS hydrolysis.

We are not looking for a special kind of polypeptides. Important is to have polypeptides and no proteins (after hydrolysis) to not induce an unexpected result – anafilaxix or strong immune response.

In using ALSAV PL3 means we use 99,9% water!

It is so!

Water is a liquid crystal. It may take the shape we choose by shaking the water- Dinamisation.

ALSAV PL3 is water with the function of the polypeptides. For that we inject this water – ALSAV PL3 in the pain locus, paravertebral, periarthrodial, subcutaneous, intramuscular or In the joint.

We inject polypeptides like solution local or regional where it is pain. We are doing a loco-regional restoration of the health energy of the body changing the ill state. In AS and RA the cure means medium or long term amelioration.

For AS or RA we need 12 infiltrations with ALSAV PL3 For other rheumatic complaints it is in a series of 6 infiltration.

We are treating the AS , AR and Osteoarthritis with the same medicine because there are no differences in etiopathogenesis.

3.

The problem of the autoimmune disease

I do not think that AS is an autoimmune disease and neither RA.

This inflammatory rheumatic diseases has a damage of the mesenchime (bone, cartilage, tendons, Synovial capsula, muscle, subcutaneous tissues).

They may appear denaturated proteins in the blood stream.

These denaturated proteins (Latex, Waaler-Rose, C reactive protein) are the CAUSE autoimmune diseases (in AS and RA) or the EFFECT of the ill state???

Maybe Arthritis and osteoarthritis are different illnesses with the same pathogenesis!!!

Think at that!

4.

Versus –

Biologic polypeptides which are blocking the immune response.

Ex. TOCILIZIMAT (ACTEMA) block interleukin 6 which is overproduced in RA joints.

- **ETANERCEPT - EMBREL**
- **ADALIMUMAB - HUMIRA**
- **INFLIXIMAT - REMICADE**
- **GOLIMUMAB - SIMPSONI**

there are blocking the TNF α (Tumor Necrosis Factor)

drug manufacturer – Roche.

- ANAKIURA - KINERET
is blocking the signal of interleukin 1

- ABATACEPT - ORENCIA
prevents T cells from being activated

- RITUXIMAB - RITUXAN
helps to eliminate B cells which are active in autoimmune diseases

5.

Side effects

All polypeptides which are blocking the immune response has liver elevated enzymes; elevated LDL Cholesterol; gastro intestinal problems even perforations. Danger in TBC and recurrent infections because of the low immune response.

ALSAV PL3 has none important side effects. Ometims a low pain at the place of the injections.

6.

Advantages of the ALSAV PL3 treatment

- 1. good effects of the cure after an acceptable treatment by injections**
- 2. Very good result in AS equivalent to a cure after 12 injections.**
- 3. Good results in RA after the same 12 injection cure.**
- 4. No important side effects**

7.

CONCLUSIONS

- 1. The autoimmune theorz of the Arthritis, especialz of Ankylosing Sodylitis will be better to have a review.**
- 2. Arthritis and Osteoarthritis are different illnesses with the sama pathogenesis.**
- 3. ALSAV PL3 is a homeopathic treatment with diluted polypeptides without antigenicity.**
- 4. ALSAV PL3 is not a specific target treatment.**
- 5. the cure means to restore the balance of the healthy energy of our body by local-regionalt injections with ALSAV PL3 asociated with general homeopathic treatment.**
- 6. ALSAV PL3 is a treatment avoid of side effects.**

If you need more detail we may fine my web page www.geosavulescu-md.ro were there are etiopatogenic talks and AS treatment.
